# Análisis de Lenguajes de Programación TP3

#### Belmonte Marina

## Ejercicio 1

La función infer retorna un valor de tipo  $Either\ String\ Type$  porque podría pasar que que un termino no este bien tipado.

(»=) v f : si v es Left t aplica la función Left a t, si es Right s aplica f a s. Esto permite que se pueda ver donde y porque ocurre el error de tipo en caso de haberlo.

## Ejercicio 4

$$\frac{\frac{x \ : \ E \in x : \ E}{x : E \vdash x : E} \ \text{T-VAR}}{\frac{F \vdash ((\lambda x : E. \ x) : \ E \rightarrow E)}{F \vdash ((\lambda x : E. \ x) \text{ as } E \rightarrow E) : \ E \rightarrow E}} \text{T-ASCRIBE} \quad \frac{z \ : \ E \rightarrow E \in z : \ E \rightarrow E}{z : \ E \rightarrow E \vdash z : \ E \rightarrow E} \text{T-VAR}}{\frac{F \vdash (\text{let } z \ = \ ((\lambda x : E. \ x) \text{ as } E \rightarrow E) \text{ in } z) : \ E \rightarrow E}{F \vdash (\text{let } z \ = \ ((\lambda x : E. \ x) \text{ as } E \rightarrow E) \text{ in } z) \text{ as } E \rightarrow E}} \text{T-ASCRIBE}}$$

#### Ejercicio 6

$$\frac{t_1 \to t_1'}{(t_1, t_2) \to (t_1', t_2)} \text{ E-PAIR1}$$

$$\frac{t_2 \to t_2'}{(v, t_2) \to (v, t_2')} \text{ E-PAIR2}$$

$$\text{fst } (v_1, v_2) \to v_1 \qquad \text{ E-FST}$$

$$\text{snd } (v_1, v_2) \to v_2 \qquad \text{ E-SND}$$

## Ejercicio 8

$$\frac{\frac{x:(\mathbf{E},\mathbf{E}) \in x:(\mathbf{E},\mathbf{E})}{x:(\mathbf{E},\mathbf{E}) \vdash x:(\mathbf{E},\mathbf{E})}}{\frac{x:(\mathbf{E},\mathbf{E}) \vdash x:(\mathbf{E},\mathbf{E})}{x:(\mathbf{E},\mathbf{E}) \vdash x:(\mathbf{E},\mathbf{E})}} \frac{\text{T-VAR}}{\text{T-SND}}$$

$$\frac{\frac{x:(\mathbf{E},\mathbf{E}) \vdash x:(\mathbf{E},\mathbf{E})}{x:(\mathbf{E},\mathbf{E}) \vdash \text{snd } x:\mathbf{E}}}{\vdash \text{unit as Unit}} \frac{\text{T-ABS}}{\vdash \lambda x:(\mathbf{E},\mathbf{E}). \text{snd } x:(\mathbf{E},\mathbf{E}) \to \mathbf{E}}}{\vdash \text{unit as Unit}, \ \lambda x:(\mathbf{E},\mathbf{E}). \text{snd } x):(\text{Unit},(\mathbf{E},\mathbf{E}) \to \mathbf{E})}}{\vdash \text{fst (unit as Unit}, \ \lambda x:(\mathbf{E},\mathbf{E}). \text{snd } x):\text{Unit}}} \frac{\text{T-ABS}}{\vdash \text{T-PAIR}}$$
